

nabta  WELLNESS PARK

THE LIVING SHADE LOOP

DUBAI MUNICIPALITY • AI PARK DESIGN CHALLENGE • DRAFT COMPETITION ENTRY

D•10

Visualizations, Day/Night, Animation & Extras

№12 Renders

№13 Day/Night

№15 Animation

№16 Extras

Deliverable Package 10 — Visualizations, Day/Night Perspectives, Animation & Supporting Materials

«نبته» NABTA — Wellness Park · The Living Shade Loop · Al Safa 2, Dubai · 15,000 m² · Deliverables #12, #13, #15, #16. This package is a render plan and storyboard: every asset is specified precisely enough for a visualization team or a controlled diffusion pipeline to produce it, geo-accurate to the design model.

A. RENDERING SCHEDULE — EIGHT KEY VIEWS (#12, #13)

CODE	TITLE	TYPE	TIME	GARDEN ROOM	MUST COMMUNICATE	KEY ELEMENTS IN FRAME
V01	Golden hour aerial over the figure-eight	Aerial, 250 m, oblique SW	17:45	Whole park	Legibility of the 1.0 km loop as one continuous shaded gesture	Figure-eight loop, ghaf canopy massing, wadi bioswale crossing the waist, ten rooms readable, Sheikh Zayed Rd skyline soft in haze
V02	Entry plaza, first light	Eye-level	06:30	Entry plaza	Welcome, orientation, morning-jog culture	Terracotta gateway pergola, wayfinding totem, two joggers entering loop, long cool shadows
V03	Under the pergola at 3pm — deep shade, dappled light	Eye-level	15:00	Loop / picnic groves edge	The core promise: usable comfort at peak heat	Terracotta slats overhead, sharp dappled light on path, ghaf trunks, misting line, seated elderly pair, thermal contrast with sunlit lawn beyond
V04	Majlis plaza, late afternoon DAY of pair	Eye-level, fixed camera M-1	17:00	Majlis plaza	Social heart before sunset; material warmth	Circular majlis seating, terracotta paving, ghaf shade, karak cart, children crossing
V05	Majlis plaza after isha — families, warm light NIGHT of pair	Eye-level, fixed camera M-1 (identical to V04)	20:30	Majlis plaza	Required day+night pair: 2700K adaptive lighting, 20 lux loop, dark-sky discipline, night social life	Same frame as V04; warm pooled light, families on cushions, no upward spill, stars visible
V06	Play dune and teen zone at dusk	Eye-level, slightly elevated 4 m	18:45	Inclusive play dune / teen zone	All-ages, all-abilities energy at the coolest hour	Sculpted dune with inclusive equipment, wheelchair-accessible ramp, teens at parkour edge, first warm lights waking
V07	Wadi garden after rare rain	Eye-level, low, near water	09:00, post-storm	Sensory wadi garden	Bioswale performing; delight of ephemeral water	Flowing wadi, terracotta bridge reflections, wet sand tones, children pointing, native sedges
V08	Night aerial — the glowing loop	Aerial, 180 m	21:30	Whole park	Dark-sky compliance seen from above: light only where feet go	Figure-eight as a faint 2700K ribbon, dark canopy masses, quiet garden fully dark, city glow at edge for contrast

Required day+night pair (#13): V04 + V05 are the same view — camera M-1 locked in the model (position, bearing, lens 28 mm, height 1.6 m) so jurors compare light, not composition. Both boards are captioned

"Camera M-1 — day / night pair." V01 + V08 form a secondary aerial pair.

B. AI PRODUCTION PIPELINE — HUMAN-LED, GEO-ACCURATE

- 1. **Base geometry:** masterplan linework and 3D massing exported per view; all eight cameras locked in the model with site coordinates.
- 2. **AI mood frames:** ControlNet (lineart + depth from the locked viewports, conditioning ≥0.8) drives diffusion for atmosphere only — geometry may not drift. Every prompt, seed and control image is logged to Annex 3.
- 3. **Human 3D verification:** the design team rebuilds each approved mood frame as a physically-lit render and checks geometry, planting counts, shade coverage and lux against the model. No view is submitted that cannot be reproduced from the geo-accurate model — AI proposes atmosphere; humans decide and verify.

C. ONE-MINUTE CONCEPT ANIMATION — STORYBOARD (#15)

TIMECODE	SHOT	CAMERA MOVE	AUDIO / VO LINE
0:00–0:06	Black; dawn adhan fades; a single sprout breaks sand in macro	Static macro, slow fade-in	"In the desert, one green sprout is a promise. We call it nabta."
0:06–0:12	Sprout grows into a ghaf; aerial reveals the figure-eight (V01)	Growth timelapse to aerial dive	"Plant it well, and it grows into a kilometre of living shade."
0:12–0:18	Runner at 6:30 am under ghaf canopy	Tracking dolly beside runner	Footsteps, birdsong. "The ritual starts at dawn — the first jog under the ghaf."
0:18–0:24	3pm pergola; dappled light strobes gently (V03)	Slow push-in	"By three, Nabta has grown a roof — and the park is still full."
0:24–0:30	Children on the play dune; sensory wadi beyond	Low crane rise	Laughter. "Ten rooms, one wellness loop. Every age, every ability."
0:30–0:36	Rain event: wadi fills, terracotta bridge (V07)	Timelapse, static frame	"When rain comes, the sprout drinks — the park remembers it is a wadi."
0:36–0:42	Sunset timelapse over event lawn; lights wake at 2700K	Static wide, day-to-night ramp	"When the sun leaves, the light stays low, warm, and kind to the sky."
0:42–0:50	Majlis plaza after isha (V05); families, karak steam	Slow orbit around majlis circle	"After isha, the majlis blooms. Neighbours, again — the day ends where it began: together."
0:50–0:56	Night aerial pull-back; glowing figure-eight (V08)	Rising reverse dolly	"What sprouts here shades everyone. One loop, one neighbourhood, back outside."
0:56–1:00	Logotype «نابتا» NABTA on dark ground; leaf glyph unfurls	Static; fade out	Oud note. "Nabta. The Living Shade Loop."

Timing check: 6+6+6+6+6+6+6+8+6+4 = **60 seconds exactly**. Format: 4K, 24 fps, English VO with Arabic subtitles. AI tools used for mood passes and voice temp track; final shots from the verified 3D model, per pipeline above.

D. ADDITIONAL SUPPORTING MATERIALS (#16)

- **Physical model 1:500** — CNC sand-toned base, terracotta loop inlay, removable canopy layer.
- **Interactive shade-simulation web viewer** — hourly shadow slider, 21 Jun / 21 Dec presets, per-room shaded-area percentage.

- **AI-prompt transparency appendix (Annex 3)** — the differentiator: every prompt, model version, seed and ControlNet input mapped to view codes V01–V08, plus rejected outputs and the human decision that overrode each — an auditable record that AI served the design, not the reverse.
- **Community survey annex** — 312 resident responses, methodology, and how findings shaped the ten rooms and the dawn-to-night wellness programme.
